High field transport in semiconductors The drifted

They are averaged exactly over the drifted Maxwellian distribution function, from which the high field transport characteristics of semiconductors can be calculated. The formulae are expressed in terms of a generalised band structure, and the effect of the mixing of Bloch states with spin-reversal scattering is included.

The high field limit for the semiconductor Boltzmann equation with Pauli exclusion terms is investigated. The limit problem is shown to have a unique solution for every given density. The proof relies on a linearization procedure together with a continuation argument. The density is finally proven to converge in the high field limit towards the solution of a nonlinear hyperbolic equation.

High field transport in semiconductors by transmission

3 Conclusion The high-field transport in the semiconductor is analyzed with the use of the transmission formalism. The one-dimensional BTE is directly solved without resorting to RTA and the perturbation expansion in the powers of electric field. The analysis is intended for a finite system with the length L , in contrast to the conventional approach of Drude model. In case only the elastic
