[Comparative morphology of the eye \(with particular ...](#)

The aim of the present study was to compare the eyes, in particular the retina, in several species of cardinal fish (Apogonidae, Teleostei) (Fig. 1), a family of approximately 300 species of diurnal and nocturnal small fishes, distributed in predominantly warm-water seas (Fraser, 1972). Although some species are pelagic, most are benthic, living in shallow waters and feeding on small prey and
