The Reaction Center of Photosynthetic Bacteria: The structure of the reaction center from the photosynthetic bacterium *Rhodospseudomonas viridis* is shown in Figure 1. The complex is comprised of three proteins called "L", "M", and "H" (Low, Medium, High) after their apparent molecular masses on an SDS polyacrylamide gel.

Photosynthetic reaction centers - ScienceDirect

Photosynthetic reaction centers can be classed into two categories based upon the nature of the electron acceptors (for a review see). Purple bacteria, green filamentous bacteria, and photosystem II belong to the pheophytin-quinone type, while green sulfur bacteria, heliobacteria, and photosystem I belong to the iron-sulfur type .
