Upwind and High-Resolution Schemes | Request PDF
The need for high-resolution schemes is a direct consequence of the nonlinear properties of hyperbolic systems of conservation laws such as the Euler equations of inviscid compressible flow.

Upwind and High-Resolution Schemes: M.Yousuff Hussaini ...

One of the major achievements in computational fluid dynamics has been the development of numerical methods for simulating compressible flows, combining higher-order accuracy in smooth regions with a sharp, oscillation-free representation of embedded shocks methods and now known as "high-resolution schemes".

Second-order Upwind and High-resolution Schemes

Second-order Unwind and High-resolution Schemes The straightforward replacement of the first-order upwind space differences by appropriate second-order accurate formulas leads to deficiencies similar to those encountered with central schemes, namely the generation of oscillations around discontinuities. This is somehow disappointing since one of the motivations behind upwind schemes is the

Validation of a Multigrid Method for the Reynolds Averaged ...

Several high-resolution schemes are formulated with the goal of improving the accuracy of solutions to the full compressible Navier-Stokes equations. Calculations of laminar boundary layers at subsonic, transonic, and supersonic speeds are carried out to validate the proposed schemes. It is concluded that these schemes, which were originally tailored for nonoscillatory shock capturing, yield

We present a finite difference scheme, with the TVD (total variation diminishing) property, for scalar conservation laws. The scheme applies to non-uniform meshes, allowing for variable mesh spacing, and is without upstream weighting.

A one-parameter family of second-order explicit and implicit total variation diminishing (TVD) schemes is reformulated so that a simpler and wider group of limiters is included.
